

Prateesh Sulikeri

Backend Software Engineer

+91-78923-02330 | prateesh.sulikeri@outlook.com | Portfolio | LinkedIn | GitHub

EDUCATION

K.L.E Dr M.S Sheshgiri College Of Engineering and Technology

B.E. in Computer Science and Engineering — 8.6 GPA

VTU University

Aug 2020 – May 2024

EXPERIENCE

Xoriant Technologies

Backend Software Engineer [Client: CLS Bank International]

Pune, India (Onsite)

Apr 2024 – Present

- Built and maintained **low-latency FX settlement components** handling **multi-bank, high-value transactions** with strict correctness, ordering, and availability guarantees in a globally distributed environment.
- Implemented **SWIFT 2025-compliant** message processing by evolving schemas and validation logic across **MFP/TDA channels**, improving regulatory readiness and reducing settlement exceptions.
- Migrated performance-critical modules from **C++11 to C++23** and refactored legacy components into **AWS-hosted Java microservices**, improving maintainability and deployment agility.
- Designed **rule-driven, session-scoped currency rejection** with audit trails, enabling 6 of 18 production currencies to migrate to **T+1 / same-day settlement** workflows and eliminating 1–2 days of settlement latency.
- Provided **L3 production ownership** for mission-critical settlement systems, diagnosing live issues and preserving settlement continuity during high-impact incidents.

PROJECTS

Go-Based Rate-Limited Event Ingestor | *Go, Gin, Redis, PostgreSQL, WebSockets*

[Read More](#)

- Designed and built a **Go (Gin)** event ingestion service simulating steady, burst, and wavy traffic, using JWT authentication, Redis-backed token-bucket rate limiting, bounded worker pools, batching, and explicit backpressure.
- Defined overload and failure semantics with retry-aware batch flushing, controlled drop behavior under token exhaustion, and bounded queueing.
- Implemented graceful shutdown logic that halts intake after sustained overload (≥5 min), drains in-flight work, and exposes system metrics via a WebSocket dashboard.

Clone Catch | *Python, TensorFlow (VGG16), Keras*

[Read More](#)

- Built an image classification and deduplication pipeline using VGG16 embeddings and KNN similarity, applying rule-based thresholds for blur detection and facial clarity with 90%+ clustering accuracy.

JinBo – Portfolio Chatbot | *LangChain, Hugging Face APIs*

[Read More](#)

- Implemented a **RAG-based** portfolio chatbot using LangChain and Hugging Face APIs with grounding and refusal strategies to minimize hallucinations.

TECHNICAL SKILLS

Languages: Go, C++ (11/23), Java (17)

Frameworks: Gin, Spring Boot, Angular

Cloud/DevOps: AWS, Linux

Databases: PostgreSQL, MongoDB

Scripting: Shell, Python

ACHIEVEMENTS

Recipient of **XOR Champ – 2025**, Xoriant's performance award for outstanding delivery, ownership, and production impact on FX settlement systems.
